

Benarx Fire Drain Plug is an effective solution for draining potential water from insulation while maintaining the passive fire protection integrity of the system.

Benarx Fire Drain Plug is a threaded stainless steel drain pipe containing a fire expanding seal bush inside. The drain plug can be mounted in various types of insulation system by use of a stainless steel plate with fastening steel bands or by fastening it by the threaded washer and nut through the bottom of Benarx Epoxy Box or other insulation boxes.

Product overview

Design

Benarx Fire Drain Plug is an effective solution for draining potential water from under fire rated insulation materials or boxes. The SS316 steel pipe with the fire expanding seal ensures the integrity of the system in a fire scenario.

The drain solution can be used in combination with the Benarx WUI Drain Plug for effective indication of water under insulation.

Dimensions (W x L)	M20 x 50mm
Operational temperature	max 180 °C
Threads	M20
